

# IGNITION INTERLOCKS SAVE LIVES

**67%:**

Reduction of drunk driving repeat offenses when ignition interlocks are installed.

**28 STATES:**

Have reduced drunk driving repeat offenses by requiring ignition interlocks after first offenses.

**300,000:**

People driving drunk each day, fewer than 3,200 are arrested.

**\$177 MILLION:**

Number of drunk driving attempts ignition interlocks have prevented since state laws have gone into effect.

**3 OUT OF 10:**

Americans will be involved in an alcohol-related crash in their lifetime.

**\$199 BILLION:**

The annual cost of alcohol-impaired motor vehicle crashes.

**90 SECONDS:**

The frequency someone is injured in a drunk driving crash.

“**T**he average drunk driver has driven drunk 80 times before a first arrest, and on any given day, your family shares the roadways with more than 2 million drunk drivers who have had three or more prior convictions. While suspending the license of these individuals makes sense, in reality, three out of four of those with a suspended license continue to drive, threatening the safety of you and your loved ones. That’s why MADD supports the usage of ignition interlock devices to require all convicted drunk drivers to prove they are sober before the car will start.”
